

Next Seminar

Saturday, 11 August 2007

Last Updated Saturday, 11 August 2007

Dear All

Our next speaker is Pablo Gutierrez who is currently preparing his Master thesis under supervision of Dr. Professor Orazio Descalzi. They study the prototype envelope equation of Quintic Ginzburg-Landau, which arises generically as an equation for a weakly inverted bifurcation associated to traveling waves. The seminar is entitled

"Existence and Interactions of Stable Localized Structures near a Weakly Inverted Bifurcation"

You are all cordially invited to assist this Tuesday at 4:00 pm (DFI, downstairs).

Best, Enrique.
