

## Spiral Cracks in Thin Sheets

Monday, 30 June 2008

Last Updated Monday, 30 June 2008

Dear All

Our student Victor Romero from USACH will give an account of his PhD work. Victor is currently studying divergent tears in different films and substrates that show very robust scaling laws. His findings can have potential applications in the packaging industry since convergent tears lead to the failure of the opening process. The seminar will take place in the laboratory Matter out of Equilibrium (FCFM, downstairs) on Tuesday at 16:00.

Best, Enrique.
